Architectural Design - Galuh Pratama

Permata Keluarga Hospital

Jababeka - Bekasi

Appointed as the Lead Architect for a large-scale healthcare expansion at Permata Keluarga Hospital in Bekasi, West Java. The scope of work involved the comprehensive planning of critical medical units, including the Emergency Department (ER), Radiology suite, Operating Theatres (OK), and a multi-story inpatient tower. Tasked directly by the Construction Director to oversee the full design lifecycle—from initial schematic floor plans and 3D modeling to high-fidelity architectural visualization. The project successfully harmonized rigorous healthcare operational standards with a high-end interior aesthetic, delivering a sophisticated and functional medical facility.

HOTEL GIIA – PASAR BARU

Hotel dengan konsep modern kontemporer yang memadukan fasad geometris, material bernuansa hangat, serta pencahayaan yang elegan. Desain dirancang untuk menciptakan tampilan bangunan yang representatif, fungsional, dan nyaman bagi pengunjung.

BESTARI MAS

A Tranquil Expression of Modern Living

defines a large-scale residential community, thoughtfully designed to offer calm and comfort within a well-structured environment. Strategically located near commercial areas, tourism destinations, and educational institutions, the development provides a peaceful living experience while remaining closely connected to the city's daily activities.

Modern Living

Served as the Project Lead for my first residential development in Bandung, overseeing the design of 184 units across 7 distinct house types. I was responsible for the end-to-end architectural process, from 3D modeling and high-fidelity visualization to the production of detailed construction drawings. The brief focused on 'understated modernism,' utilizing a refined material palette to avoid visual excess. Internally, the spaces feature vibrant, modern color schemes to create a lively atmosphere, all integrated within a sustainable layout concept.

Rimba Padel

Permeable Pavilion, an architectural space that lives, responds, and adapts to the tropical environment while embodying the dynamic spirit of padel. merges these two systems - movement and climate - into one architectural expression.

ONE PLACE® RESIDENCE

A Bali-style villa in Seminyak designed with an 'open flow' concept. Moving away from boxy shapes, the layout connects rooms naturally using local materials. Each villa is carefully positioned to ensure guest privacy and a peaceful atmosphere.

Ascend

An ambitious renovation of a sports and wellness center in Jalan Satrio, Jakarta. By exploiting its strategic dual-street orientation, the project introduces new tenant areas and a main lobby to enhance commercial viability. The design prioritizes the Jalan Satrio frontage, utilizing a modern facade to create a strong 'point of interest' that elevates the building's presence in a high-growth business corridor.

SMASH ZONE

"Benteng Semangat, Arena Juara"

This landmark project at the intersection of Gading Serpong's main thoroughfare redefines the sports-retail typology. The development features eco-friendly padel courts integrated with their natural surroundings, wrapped in an eye-catching terracotta envelope. The facade is meticulously curated to highlight commercial storefronts as the primary 'points of interest,' creating an iconic street presence that has proven instrumental in securing vendor partnerships and enhancing the site's commercial prospect.

Kedamaian Residence, Lampung

As the lead for a comprehensive residential renovation project in Lampung, I directed the entire project lifecycle, beginning with the translation of high-level client visions into nuanced, functional architectural concepts. My role extended far beyond initial design and visual storytelling; I took a hands-on approach to the technical execution phase by providing critical oversight and assistance in finalizing the construction documentation. This ensured that every architectural detail remained consistent with the original design integrity from the first blueprint to the final onsite build.

The design is rooted in a warm minimalist philosophy, intentionally utilizing a refined beige-toned palette to cultivate an atmosphere of sophisticated coziness while simultaneously maximizing the perception of volume to meet the client's request for a more expansive, airy interior. This pursuit of understated elegance extends to the exterior, where the architectural language prioritizes simplicity through the strategic integration of Wood Plastic Composite (WPC) cladding and textured green wash-paint finishes. These material choices create a natural, organic aesthetic that not only harmonizes with the surrounding environment but also ensures a seamless visual alignment with the established identity and character of the broader housing development.

Mr. A House & Villa Dago

Located in Dago, Bandung, this project embraces its scenic surroundings by integrating the sloping topography into the architectural form. By juxtaposing different design languages for the house and the villa, the project achieves a unique architectural character for each structure, ensuring they complement one another while maintaining their own distinct identities.

The interior design establishes a clear distinction between public and private zones, with the private quarters tailored to reflect the unique personality of each inhabitant. A compelling contrast is created between the dark-toned facade and the luminous interiors, fostering a sense of exclusivity for the occupants while remaining visually intriguing to observers. Following the client's vision, the master and children's bedrooms feature a modern industrial aesthetic, while the guest and parents' rooms adopt a warm modern-minimalist style for a timeless, welcoming atmosphere.

As the Project Lead, I welcomed the challenge of integrating Modern Balinese interiors—a first for my portfolio—at the client's request. The design focuses on maximizing visual connectivity to the outdoors. At the heart of the home, the main public area features a double-height ceiling (double volume), creating a seamless sightline that spans from the foyer out to the pool and gazebo, blurring the boundary between interior and exterior.

Front One Tomang

Workshop Bekasi

Entrusted with the interior development of PT Rimba Insantek Mandiri's showroom and workshop, I managed the project from initial client consultation to design finalization. The project features a Modern Industrial concept, merging sterile, polished finishes with raw industrial elements. This approach creates a sophisticated backdrop that reinforces the functional identity of the piping systems on display

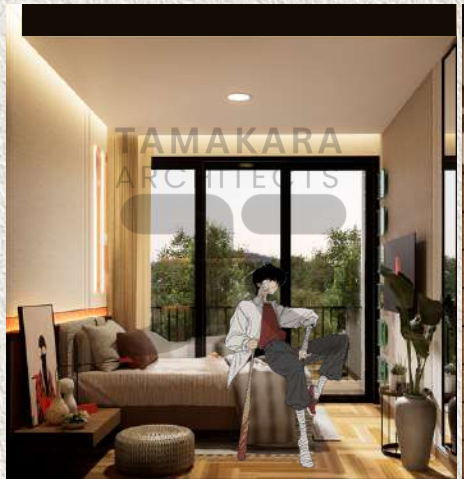

Mr. A House

balance physical form with human emotional, cultural, and spiritual well-being. nurtures both the body and the inner experience of the user.

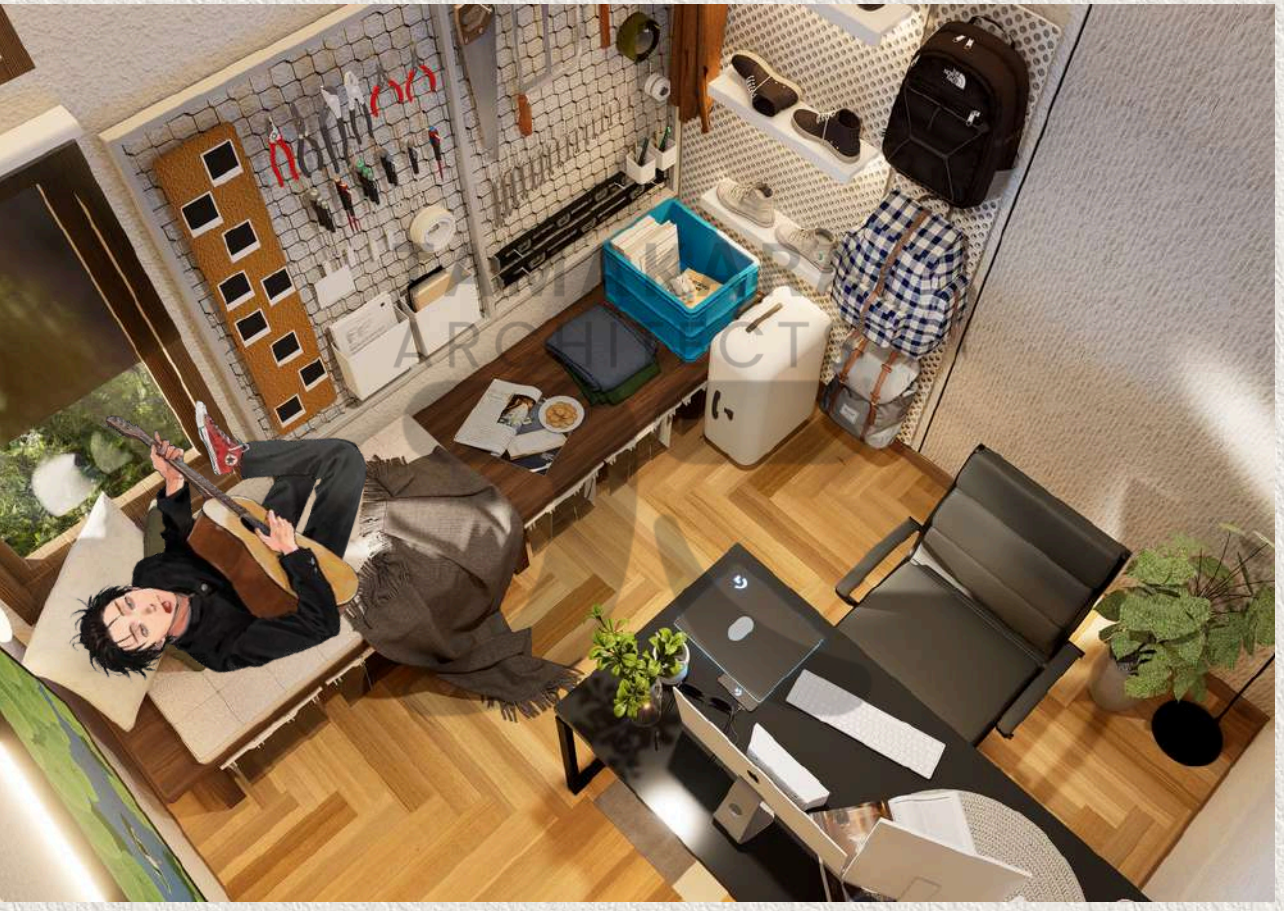

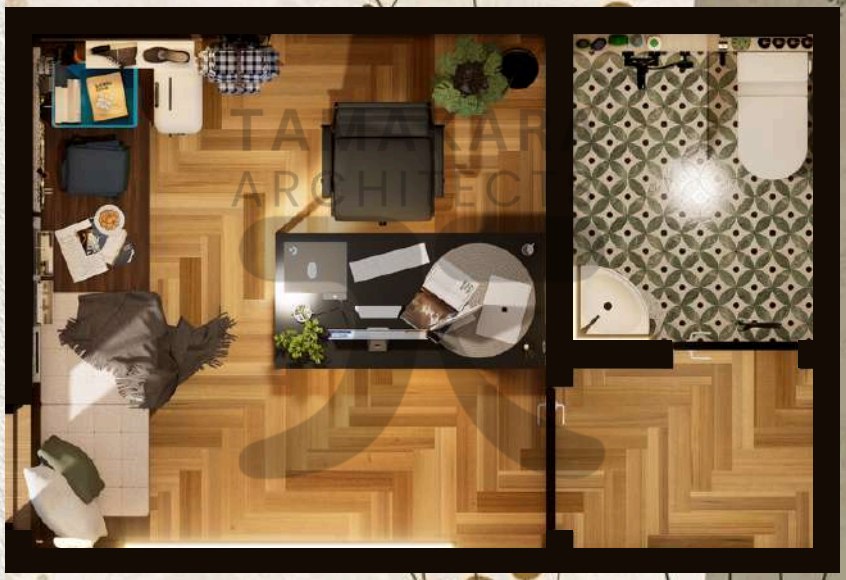

Designing for a friend is a unique privilege—it allows me to blend professional expertise with a personal understanding of my character. For my project, I've leaned into an Eclectic Architectural Style, a philosophy that favors curation over conformity. Eclecticism thrives on storytelling. I am integrating pieces that reflect his history and interests alongside contemporary architectural finishes. This creates a home that feels "collected over time" rather than bought from a single showroom.

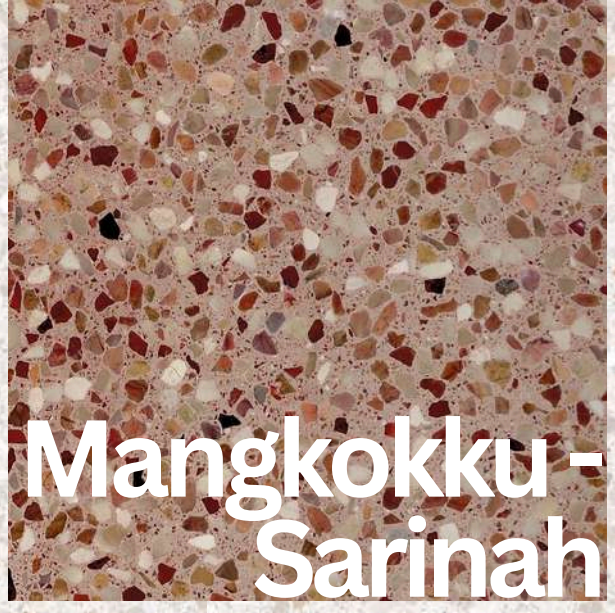

Mangkokku - Sarinah

Mangkokku, founded by the renowned Chef Arnold, is undergoing a rebranding to adopt a fresher, more vibrant identity—transitioning from traditional wood tones to a bold red and white color scheme. The Mangkokku Sarinah location, already established, required renovation to align with this new branding. Entrusted with conceptualizing the renovation, I seamlessly blended Nusantara traditional elements with the new red and white aesthetic, ensuring a harmonious integration of both styles.

TAMAKARA ARCHITECTS

Kappa Zanzibar

Kappa Zanzibar is my last project and marks a significant milestone in my architectural journey as my first venture outside of Indonesia. Situated in Pwani Mchangani, Tanzania. This resort encompasses a variety of accommodations, including villas, hotels, restaurants, etc. Designed to harmonize with the natural landscape, the resort leverages the existing contours rather than flattening the terrain. The residential buildings are strategically positioned in the top-middle area to maximize breathtaking views of the surrounding nature and most importantly, the sea. Meanwhile, the restaurant is located at the lowest point, creating a beach-club atmosphere, complete with an infinity pool that seamlessly blends with the stunning shoreline.

Umalas Residential

Umalas Residential Development is the first project that is fully entrusted to me, located in the serene area of Umalas, Bali. Designed as a villa-type residential complex, it features four distinct room types. The project's primary goal is to create a neighborhood that fosters harmony with nature while prioritizing user privacy. The final design aims to facilitate a sense of connection among residents and their surroundings, allowing them to engage with the community while also enjoying personal space when within their own homes.

Each rooms has its own unique facade as well as the interior with only one type that is not designed as private villa-type residential which is the one-bedroom type. The interior design aimed to create a minimalistic aesthetic, predominantly featuring the color white throughout the space; in fact, the client specifically requested that even the door and window frames be painted white, while the furniture would incorporate warm wooden accents to provide a subtle contrast and enhance the overall ambiance.

A L House

Nestled in a serene village of Cimahi, West Java. This modern minimalist home harmonizes with its tranquil surroundings, blending sleek lines and open spaces to create a peaceful retreat that celebrates simplicity and nature. Entrusted by a friend to make the design of their family's new house. The owner basically wants the house to have letter "L" as its floor plan with an open space at the back, that will be used later for either pool, garage, or a space for families gathering.

Al-Muhajirin Theraphy Room

Located in my own hometown, Bandung of West Java. Entrusted to make interior project that function as Medical Room for its Islamic Traditional medical therapy called "Bekam". The room designed to have significance amount of private for the user since it built in communal area (Mosque) and greatly increase focus for the doctor to do the practice.

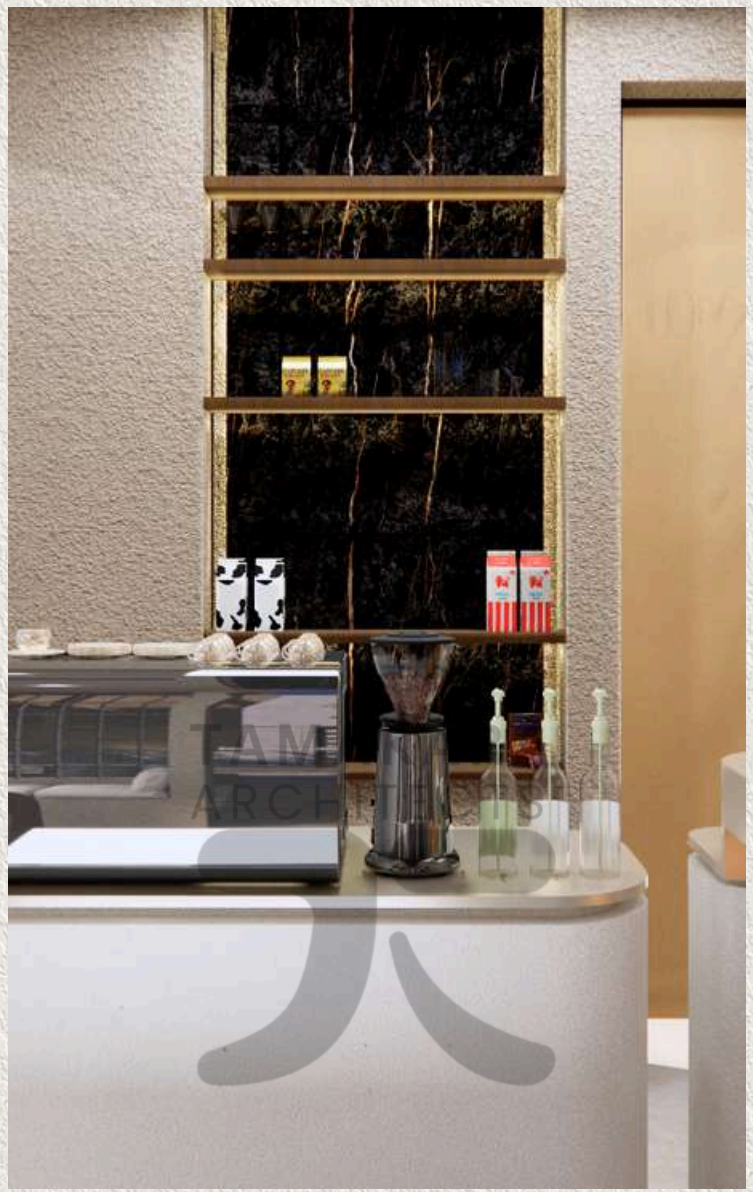

Tamakara Café & Eatery

*Design submited for Arna Design Competition 2024

Meet Tamakara, a sophisticated and elegant café and eatery nestled in a serene suburban setting, epitomizing minimalist elegance. Its design embraces simplicity, featuring clean lines and an airy ambiance that fosters relaxation and conversation. The floating walls and dynamic shapes create an illusion of space, while natural light enhances the tranquil atmosphere.

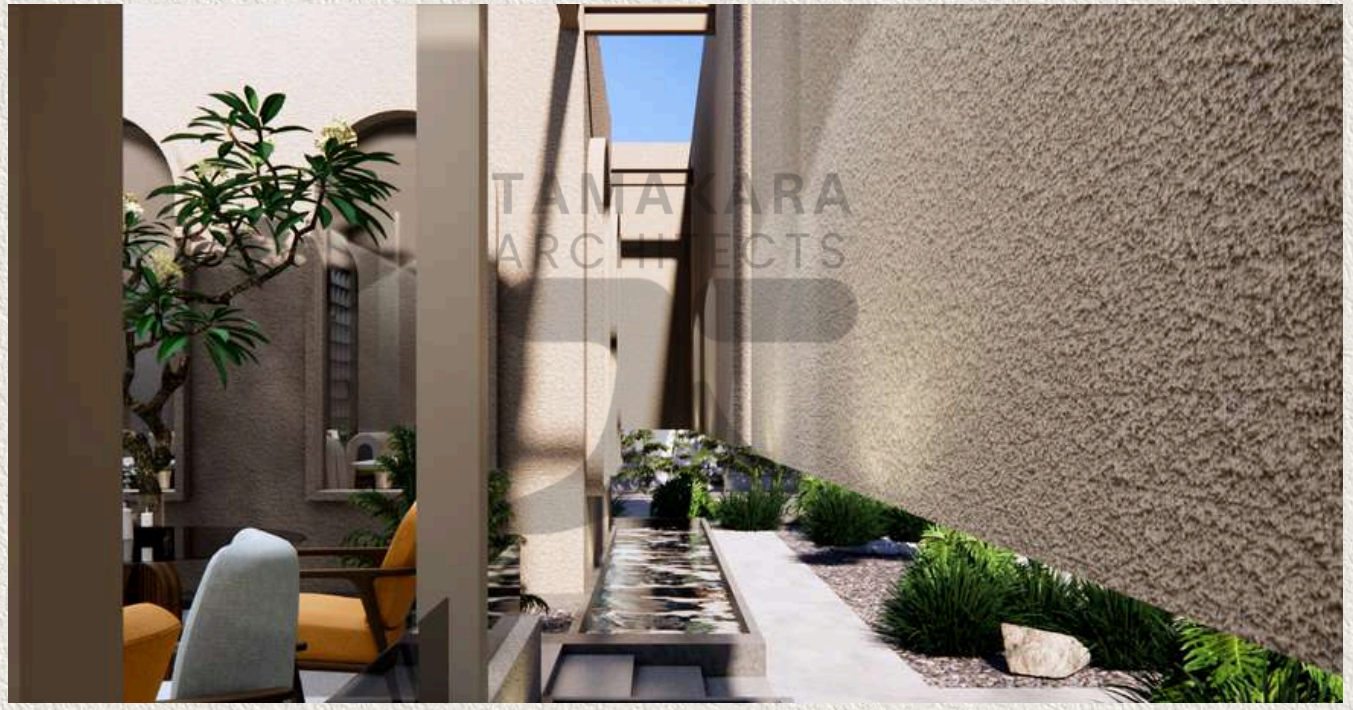

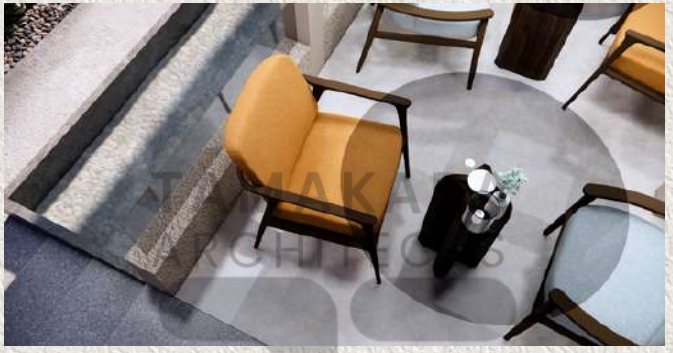

The interior design reflects our ethos of bringing elegance to everyone, as plush seating arrangements invite patrons to unwind in comfort. With soft, earthy tones and the application of granite tiles by Arna create an atmosphere of understated luxury, while maintaining a cozy and welcoming atmosphere. Arna Granites truly showcase an impeccable quality, boasting durability and timeless elegance that elevate any space they adorn. Each corner of Tamakara exudes a sense of intimacy and charm, making it the perfect retreat for both solitary contemplation and convivial gatherings.

Berawa Living

Designed to serve as a Guest House, I was entrusted to handle 2D drawing of the detail of the building. Three floors with rooftop function as swimming area for the whole building user. The building itself use modern minimalist architecture style also as the interior to gives more space to move around with while still getting the esthetic of simplicity.

Seseh Living

Situated amidst the lush landscapes of Seseh, Bali. Seseh Living offers a haven of comfort and serenity. Drawing inspiration from the timeless elegance of Scandinavian architectural style, our interiors are thoughtfully curated to evoke a sense of calm and tranquility. Here, clean lines and natural light combine harmoniously with locally sourced materials, creating a space that is both inviting and authentic. From the warmth of reclaimed wood to the earthy textures of indigenous stone, every element is carefully selected to impart a cozy and laid-back atmosphere.

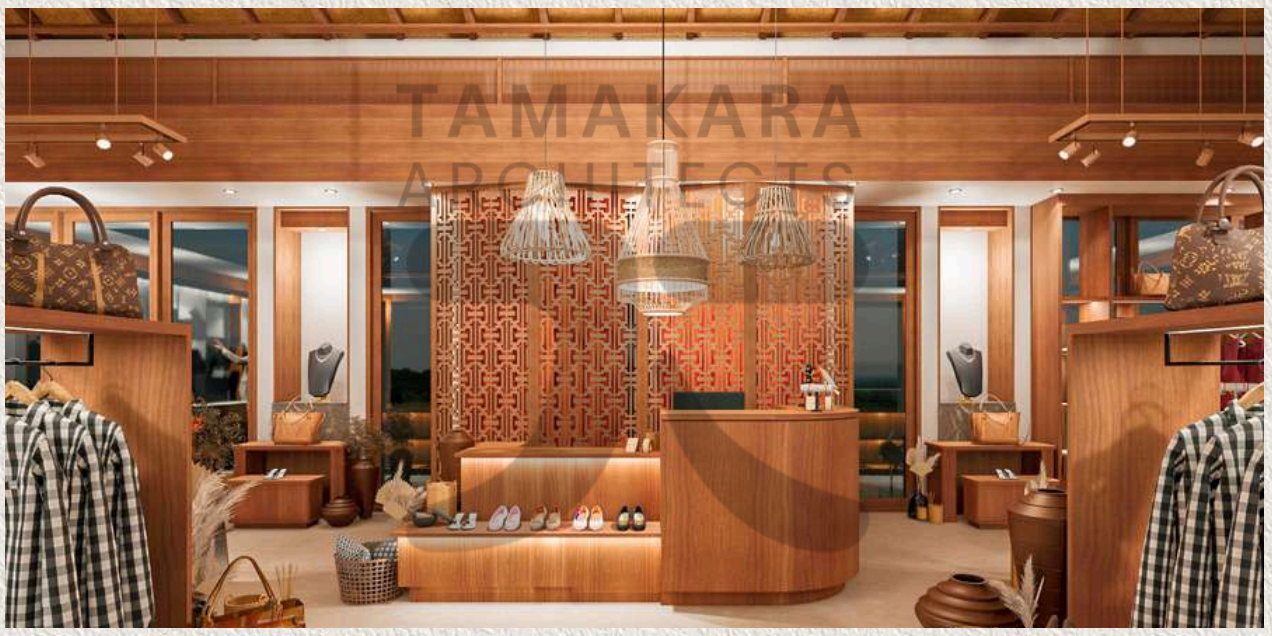

Andaz Shop Sanur

Nestled in the heart of Sanur, Bali, Andaz Shop is a boutique that offers countless amount collections of modern-chic woman inspired clothing. As you step through its inviting entrance, you're enveloped in the warmth of natural materials, with rich wood accents adorning every corner. The boutique's interior is a masterpiece of design, where sleek lines and organic textures harmonize to create a space that is both modern and inviting. Sunlight filters through the windows, casting a soft glow upon racks.
